

Education

2011–Present **Bachelors in Computer Science**, *Marist College*, Poughkeepsie, NY.
Minor: Information Technology
Major GPA: 3.62 Overall GPA: 3.55 Expected Graduation: May 2014

Work Experience

2014–Present **Systems Engineer**, *FactSet Research Systems*, Norwalk, CT.

May–Jun 2013 **Systems Engineering Intern**, *FactSet Research Systems*, Norwalk, CT.
Developed quota tracking and alerting application utilizing a well-developed NetApp, Isilon, and GPFS enterprise storage system. Participated in on-call rotation performing midnight emergency fixes for various outages for the UNIX Team.

2012–2013 **Full-Stack Web Development Intern**, *Spectrum Graphics*, Poughkeepsie, NY.
Developed critical back-end processes including fuzzy-duplication resolving using both the SOUNDEX algorithm and Levenshtein Ratio, mass-email personalization and sending through a personally developed mail-merge program and the PowerMTA API, and both importing and exporting data with a highly-normalized database. Performed daily system administration on an in-house Ubuntu server. Such as maintaining backups, monitoring and performing security upgrades, and daemon installation and administration for dependencies of our SaaS. Performed Database Administrative duties on an Amazon RDS Instance. Attended Oracle World's MySQL Connect in 2012.

2011–2012 **Residential Networking Technician**, *Marist College Resnet*, Poughkeepsie, NY.
Provided technical support for over 4,500 students and staff, both on site and by telephone (diagnosis and removal of virus/malware problems, network connectivity, and hardware and software problems). Operated as the GNU/Linux Office Specialist. Performed data recovery and secure deletion of user's personal data.

2008–2010 **Technician**, *All Computer Repair*, Highland, NY.
Performed Windows and Debian GNU/Linux System Reinstallations. Configured a LAMP Server, and a High-Performance Cluster for Internal Use. Supervised and trained interns.

Projects and Open Source

November 2012 **pyrest**, <http://pypi.python.org/pypi/pyrest/0.5.0> .
Small python Middleware abstraction at the http request layer. It is a tool I designed to make it easier to build service-level API wrappers. I used this to interface with the Github Issues API to create an automatic change log for an internal service at Spectrum.
Technologies: Python, Git, distutils, pip, PyPi

August 2011 **pymafia**, <http://github.com/travisby/PyMafiaWeb> .
Django automated Mafia Administration Website and API. Automates the party game "Mafia," which is traditionally played in person, and has picked up popularity on Internet Forums. pymafia acts as the Game Master, who is usually a player left out of the game.
Technologies: Python, Django, Git, Heroku, PostgreSQL, SQLite, pip, django-tastypie, South, cron

November 2012 **Tricktech Website**, <http://tricktech.herokuapp.com> .
Small Django Website for a small business. Built originally for a school project, but now is standing as our business' official website.
Technologies: Python, Django, Git, Heroku, PostgreSQL, SQLite, jQuery

November 2012 **Four-Year Planner for Class Registration**, <http://github.com/travisby/fourYearPlanner> .
Marist College Computer Society Hackathon Project to act as a class registration suite. The Django application would handle both the student-facing section, and the administrative section of class registration.
Technologies: Python, Django, Git, PostgreSQL, SQLite

August 2012 **Fuzzy Duplicate Record Discovery Application**, *Spectrum Graphics*.
Locates "fuzzy-matches" of database records above a certain likeliness threshold, taking over a dozen fields into consideration.
Technologies: Python, MySQL, Levenshtein Ratio, SOUNDEX Algorithm, Metaphone Algorithm, RabbitMQ

January 2013 **Consolidation of Queries for a Memcache Implementation**, *Spectrum Graphics*.
At Spectrum, we had previously written custom queries across our twelve applications. For my implementation of memcache, we needed to move all of the queries into a single maintainable location. I wrote an API that our products now interface with, rather than all accessing the database themselves.
Technologies: MySQL, CodeIgniter, CodeIgniter Rest Server, Amazon Web Services, Memcache, Python, PHP

Volunteer and Leadership Positions Held

- Elected Marist College Computer Society President since February 2012
- Elected Executive Webmaster for Marist Game Society since April 2012
- Server Administrator for a Dedicated Server for Marist IT Systems since 2011
- Elected Student Board of Education Representative on the Highland Board of Education in 2010

- Volunteered as a Fourth and Fifth Grade Catechist at St. James since 2009
- Volunteered as Highland High School Assistant Coach since 2011
